# How much each model thinks, at each setting

Thinking tokens per answer on the eleven photos. Box: the middle half of the answers; line: the middle answer (number above).

1,187 answers, 11 photos, 3 tries per setting (Terra at max: 32). Eight models were run at three settings; the others have medium only (GLM, Kimi, Mistral: their high). Muse Wonder: our plan; Muse Wonder (API): the copy on the published charts. Log scale. Whiskers: furthest answer within 1.5 box heights, dots beyond. Counts as each provider reports them. A Claude answer may use at most 32,000 tokens.
