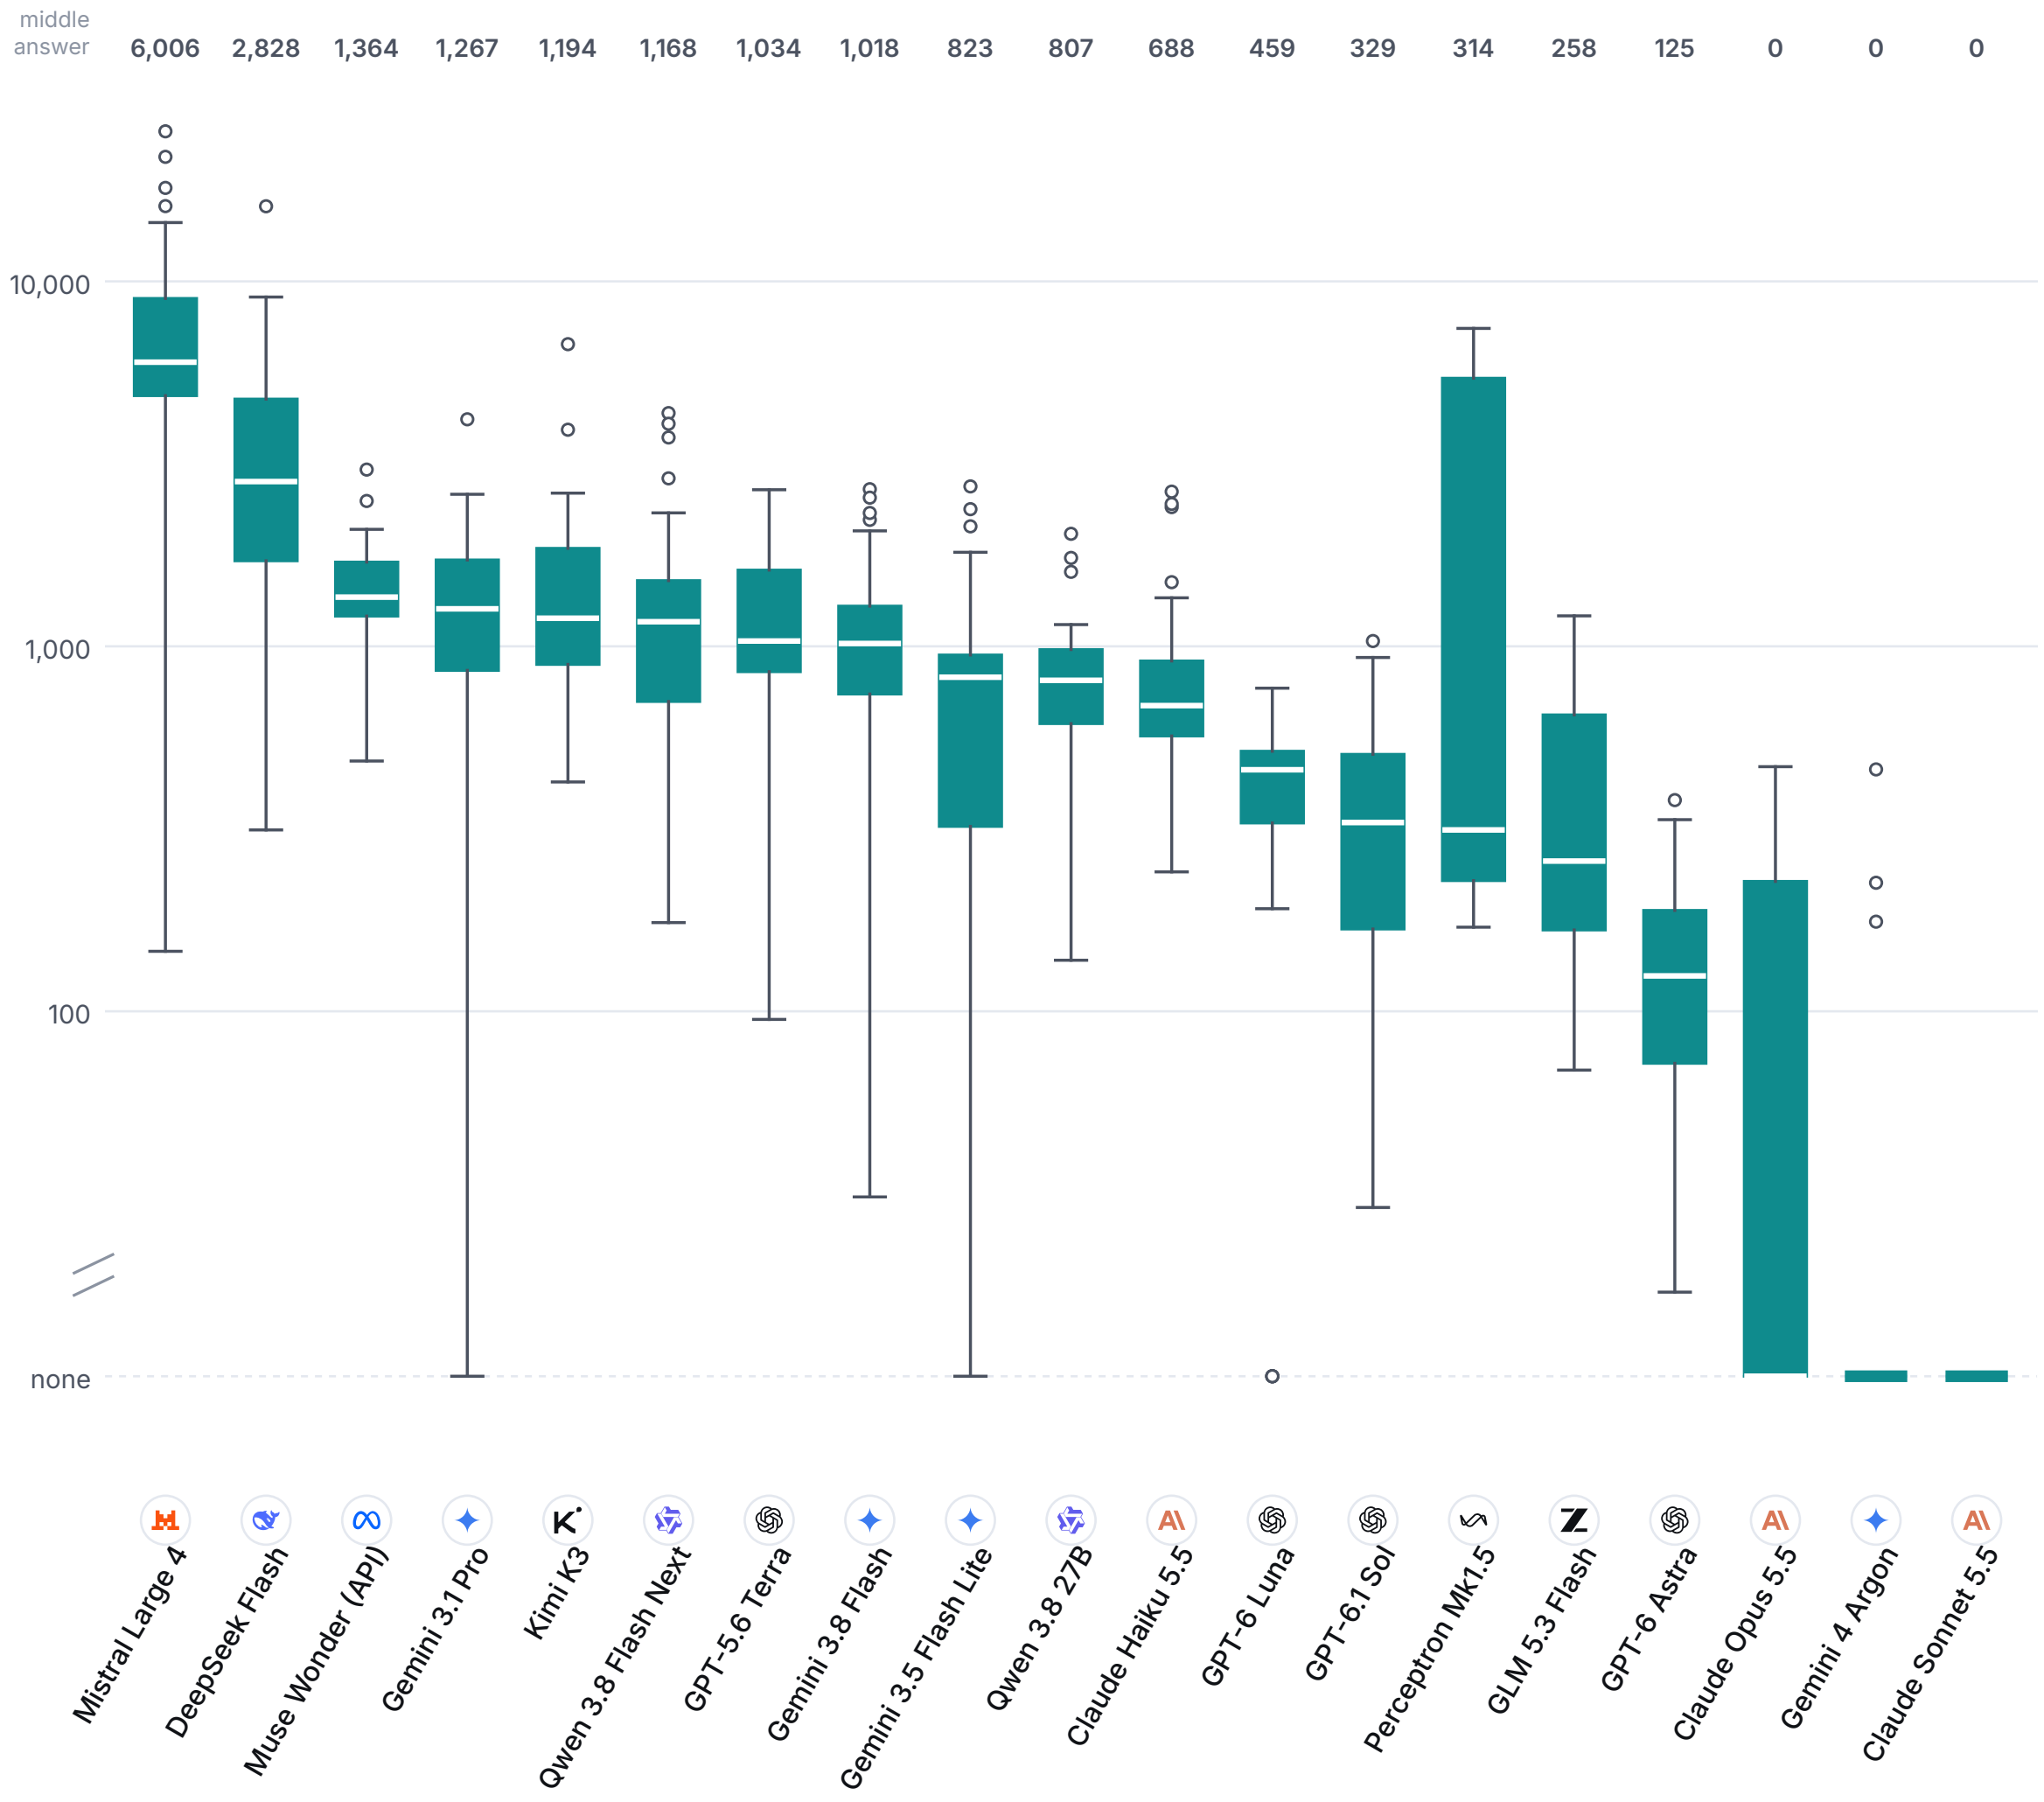
How much each model thinks before pointing

Thinking tokens per answer on the eleven photos. Box: the middle half of a model's answers; white line: the middle answer (number above).



627 answers: 19 language models, 11 photos, 3 tries, at the medium thinking setting of the photo chart (GLM, Kimi and Mistral: their high).

Whiskers reach the furthest answer within 1.5 box heights; dots are answers beyond. Log scale: each line up is ten times more. Counts as each provider reports them.
