What happened to each model's boxes and objects

Every correct box, wrong box and unfound object, as a share. Models sorted by correct boxes.

825 answers: 27 models, 11 photos, 3 tries (SAM 3, YOLOE, RF-DETR 1). Shares taken within each answer, then averaged over tries and photos (every photo counts the same). Numbers under 8% not printed. Correct: the box and a real object's box share at least half of their combined area.
