Where each model's box mistakes go

Share of each model's mistakes in four kinds. Models in the same order as the correct-boxes chart.

- Right object, box off or around several
- Extra box: on nothing, a look-alike or a repeat
- Object never found
- Whole answer broken (no answer, doom loop, wrong coordinates)

825 answers: 27 models, 11 photos, 3 tries (SAM 3, YOLOE, RF-DETR 1). Mistakes = wrong boxes + objects left unfound. Shares taken within each answer, then averaged over tries and photos (every photo counts the same). Numbers under 8% not printed. Orange includes one box around several objects.
