Where each model's mistakes go

Models sorted by their charted score (number above each bar). Mistakes = wrong answers + objects left unfound; shares taken within each answer, then averaged over tries and photos, as the score is.

Aimed at the right object, landed off | Extra answer, no object to earn | Object never found | Whole answer broken (no answer, doom loop, wrong coordinates)

Points: share of each model's mistakes

Boxes: share of each model's mistakes
